

Red Rock Master Plan Focus Area - Connections

Goal: Create interpretive opportunities that connect people to the environment and encourage play in nature

Watchable Wildlife Areas - Connecting people and the Environment

- Watchable Wildlife Areas tend to attract a diversity and greater number of wildlife due to the habitat features of the site.
- These areas provide better opportunities for people to view wildlife in their natural habitats.
- These sites have design elements or developed features that enhance the experience of the viewer, while limiting disturbance to the wildlife.
